EXEL motor[®] Moto

ENGINE TREATMENT

exel motor[®] Moto is a long-lasting engine treatment **SPECIFIC** for motorcycles. It is particularly suitable for motorcycles over 3 years old (or having traveled more than 20 000 km). **exel motor[®] Moto** comes in the form of 2 bottles: Bottle 1 ("shock" treatment of gasoline) and bottle 2 (specific treatment of the lubricant) are used at the same time during a maintenance operation of your motorcycle

WHEN TO USE IT

Double integral high and low engine treatment, high-tech concentrate from petrochemicals. 100 ml.

Cleans and protects:

- **Low engine:** the lubrication circuit, cleans the grooves and low segmentation of the engine.
- **High engine :** High segmentation, combustion chamber, injectors or carburetors, injection system and valves for 10,000 km.

- Recommended for motorcycles 20,000 km or more.
- Suitable for all engine technologies.

PROPERTIES

- **Cleans and completely protects** the top and bottom motor (deposits a protective film on all the engine parts).
- **Eliminates overconsumption of fuel** due to engine fouling and injector or carburetor malfunction.
- **Restores the proper functioning of the injectors** and protects them from corrosion in the long term thanks to antioxidants, reduces pollutant emissions to manufacturer standards.

DOSE 1 in fuel (high engine), cleans and protects:

- Injection pump.
- Carburetors.
- Injectors.
- Valves (protection of the valve guides).
- Filters.
- Combustion chamber.

And created a protective and anti-friction film that adheres to metal surfaces and limits any new deposits.

DOSE 2 in the sump (low engine), cleans and protects:

- Sealing segments.
- Scraper segments.
- Lubrication system.
- Crankcase (crankshaft, connecting rod bearings) .

And deposits an anti-friction protection that adheres to metal surfaces and limits wear.

ADVANTAGES

- Reduces fuel consumption by up to 15%
- Reduces polluting emissions
- Increases the longevity of the engine and significantly improve its performance

Made in France

RÉF. : 53MOTO
GENCOD : 3760057130835

The efficiency of the engine is optimized, which reduces both its overconsumption of fuel and its polluting emissions.
